DETAILED ACTION

Allowable Subject Matter

- 1. Claims 1-23 are allowed.
- 2. The following is an examiner's statement of reasons for allowance:

None of the prior art teaches or suggest a filter circuit performs a sampling on a series of analog input signals, inputs them on a time series, and simultaneously multiplies a time-series analog sampling signal by a coefficient before computing. The filter circuit comprising a plurality of unit circuits including a first stage unit circuit, at least one second stage unit circuit, and a final stage unit circuit mutually connected in series, each of the first stage unit circuit, the at least one second stage unit circuit, and the final stage unit circuit are consecutively arranged, each of the unit circuits comprising a computing means; the computing means in each of the first stage unit circuit and the at least one second stage unit circuit successively transmitting to a respective unit circuit of an immediately following stage a computing result of a) an analog input signal sampled at a same sampling timing and b) a coefficient predetermined for each of the computing means, the computing result of the computing means of each of the first stage unit circuit and the at least one second stage unit circuit being computed by adding a value of a residual, respectively input to each of the first stage unit circuit and at least one second stage unit circuit from a respective unit circuit of a previous stage, and an analog computing result based on the analog input signal and a coefficient for the computing means, to obtain an added value, low-bit quantizing the added value to obtain a quantization result, subtracting a D/A converted value of the

quantization result from the added value to obtain a residual value, and successively transmitting the quantization result as the computing result and the residual value to a following circuit, the computing means of each the first stage unit circuit and at least one second stage unit circuit mutually adding the computing result and a computing result of a unit circuit of an immediately preceding stage so as to compute in the final stage unit circuit a cumulative value of computing results of all the coefficients and time-series analog sampling signals whose number corresponds to that of the coefficients, and the cumulative value is outputted as digital data, wherein the previous stage residual and

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

computing result values for the first stage unit circuit are default values.

Conclusion

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Eva Yi Zheng whose telephone number is (571) 272-3049. The examiner can normally be reached on 7:30-4:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Stephen Chin can be reached on (571) 272-3056. The fax phone number for the organization where this application or proceeding is assigned is 703-879-9306.

Any response to this action should be mailed to:

Application/Control Number: 09/598,954 Page 4

Art Unit: 2634

Commissioner of Patents and Trademarks

Washington, D.C. 20231

or faxed to:

(703) 872-9314 (for Technology Center 2600 only)

Hand-delivered responses should be brought to Crystal Park II, 2121 Crystal Drive, Arlington, VA, Sixth Floor (Receptionist).

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the Technology Center 2600 Customer Service Office whose telephone number is (703) 306-0377.
